SUMMARY

Fullstack developer who has grown into backend and platform engineering, now building production services in Go at Jubelio. Comfortable owning a feature end-to-end — from requirement analysis and API design through deployment and post-release support — with hands-on experience building event-driven webhook pipelines with Debezium, Kafka, and Go, moving audit logging onto ClickHouse, and debugging production incidents under pressure. Started as a bootcamp graduate with a perfect 4.00 GPA and has since shipped real systems used by internal teams and external clients.

EXPERIENCE

Fullstack Developer & Technical Support (API)

Jul 2025 – Present

Jubelio

South Jakarta, Indonesia (Hybrid)

- Revamped the webhook platform into Webhook v2, rewriting the Node.js consumer in Go; changes are captured from PostgreSQL with Debezium (CDC), streamed through Kafka, and processed by concurrent Go consumers for higher throughput
- Reworked webhook storage so v1 and v2 run side by side: existing webhooks stay on v1 by default, and users choose v1 or v2 in the UI when creating new ones
- Added a Redis-tracked per-tenant retry threshold to both webhook versions: once a tenant reaches 500 pending retry messages, new retries are refused until one is consumed or its 1-hour TTL expires, keeping the retry queue from bloating
- Built a webhook resend feature (Node.js, RabbitMQ, React) with configurable batch size and per-batch delay, plus bulk resend of every webhook matching a filter tracked in Redis; progress reported via short polling, chosen over WebSocket/SSE since real-time push wasn't required
- Designed the audit log pipeline: PostgreSQL triggers on every table feed a central audit table that Debezium streams into Kafka and ClickHouse ingests through its Kafka engine; audit history is served from ClickHouse since the PostgreSQL copy is truncated after a few days
- Added a ClickHouse materialized view that routes email-flagged audit events back to Kafka for the email service
- Built app health monitoring: Kong Gateway error rates are aggregated in ClickHouse, and a scheduled job publishes status changes (e.g. warnings) as app health metrics into the central pipeline so users get notified
- Built the App Store dashboard end-to-end, both the UI and its API
- Owned features end-to-end from requirement analysis through deployment and post-release support, partnering with Product and QA
- Served as the primary technical contact for client integrations; investigated recurring production incidents with root cause analysis, hotfixes, and long-term reliability fixes
- Reduced technical debt by refactoring legacy modules and expanded unit and integration test coverage across backend services

TECHNICAL SKILLS

Languages & Backend: Go, JavaScript, TypeScript, Node.js, Express.js, REST API design, event-driven architecture

Frontend: React.js, Next.js, Redux, Zustand, TanStack Query, Tailwind CSS, Bootstrap, jQuery

Data & Messaging: PostgreSQL, MySQL, MongoDB, ClickHouse (Kafka engine, materialized views), Kafka, Debezium (CDC), RabbitMQ, Redis, Prisma, Sequelize, Mongoose

Auth & Security: JWT, OAuth (Supabase), bcrypt

Infrastructure & Tools: Git, GitHub Actions, Docker, Kubernetes (fundamentals), Kong Gateway, Postman, Vercel, Jest, React Testing Library, ESLint, Prettier

AI-Assisted Development: Claude Code, OpenCode, GitHub Copilot

CERTIFICATIONS

Full Stack Developer Bootcamp

Dec 2024 – Feb 2025

Harisenin.com

Jakarta, Indonesia

- Graduated with a 4.00/4.00 GPA, ranked 3rd fastest to complete Batch 14
- Built and presented a movie web app as the capstone project
- Covered HTML, CSS, JavaScript, React.js, Zustand, Express.js, Node.js, MySQL, and Next.js

Fullstack Web Development Bootcamp

Jul 2024 – Nov 2024

*Udemy — Instructor: Angela Yu**Online*

- Completed a comprehensive fullstack development course covering JavaScript, Express.js, React.js, and PostgreSQL

Responsive Web Design Certification

Jun 2024 – Jul 2024

*freeCodeCamp**Online*

- Completed the HTML and CSS curriculum, including responsive layouts and accessibility best practices
